

## Simple and Secure Messaging for Global-Class Compliance, Visibility and Business Process Automation

Due to stringent government regulations (HIPAA, PCI, FISMA, Ferpa, etc.), increases in data theft, and accidental leakage of critical information, there has never been a greater need to secure your email communications. One mistake can result in irreparable damage to a company’s reputation and mounting financial losses. CIOs, risk managers, and IT directors all face pressure to protect the privacy of sensitive email messages without imposing undue technical hurdles on the recipients. Even though encryption technology has been available to address these needs, it has often been cumbersome to use and expensive to deploy

## Mitigate Risk By Managing Your Communications

SecureMail is a powerful, cost effective, and easy to use service that encrypts messages between your organization and your constituents. Messages can be chosen for encryption selectively by the sender and also by policy enforcement across the entire organization. With SecureMail, you can ensure that your messages and large files are protected, private, and are compliant with internal policies and external regulations.

Built atop DataMotion’s Intelligent Information Transport (IIT) platform, SecureMail offers global-class security, scalability and flexibility. Now, businesses of all sizes can affordably benefit from the same high-end encryption used by government agencies, and large financial and healthcare companies.

- Recognize immediate cost reduction, improve your bottom line, and increase your business’s competitive advantage.
- Reduce your exposure to compliance policy violation, litigation and penalties.
- Make intelligent business decisions with the visibility gained from management, control, security and reporting of data exchanges.
- Extend trust by developing more secure communication between you and your customers.
- Quickly and cost-effectively reduce human error so you can focus on your business priorities.

*“We needed a solution that minimally impacted existing business processes, did not require additional training or steps for the user, and did not alter our existing IT infrastructure. The DataMotion solution met all our requirements and was cost effective as well.”*

## BENEFITS

**Trustworthy communication with your customers and partners** - With robust encryption and easily-tracked delivery paths, you can send sensitive information with confidence.

**Immediate cost containment** - Cut costs associated with IT resources for ftp servers, training and support.

**Fast deployment** - SecureMail leverages existing IT infrastructure by integrating seamlessly with existing messaging or disparate systems. Installation and training time are minimal so you can focus on more important business priorities.

**Reduced Risk** - Minimizes exposure to policy violation, litigation and penalties.

**Compliance** - Exchange information with full confidence that files remain secure and compliant during transit and in storage.

**Better Control** - Messages are monitored, tracked and reported on every step of the way. This enhanced visibility helps you improve business processes and make better business decisions.

**Simplicity** - Have all your users securely exchanging information within hours.

## FEATURES

Automatic Account Provisioning

HTML and CSV Reporting

Simple to use Encryption - No PKI necessary

APIs for integration with legacy systems or business productivity systems

Full administrative control to enforce policies, preferences, alerts and reporting

Built-in tracking and auditing for messages

Push technology enables delivery of password-protected, sensitive data or files directly to an inbox

Cobranded portal

Fully compatible with on-premise or cloud based archiving systems

Offered on premise or Saas

No additional hardware or infrastructure needed

Up and Running within a Day

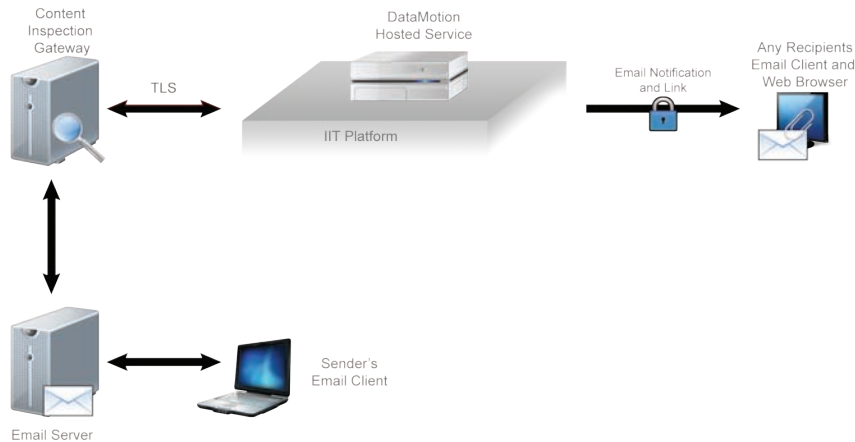

Works with Exchange, Lotus Notes and Groupwise

24 x 7 x 365 Monitoring

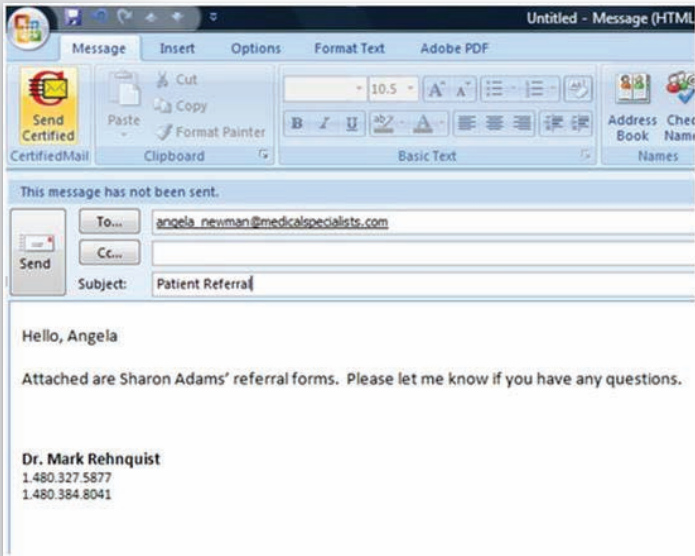

## ADDITIONAL TECHNICAL SPECIFICATIONS:

- Industry Standard encryption: 3DES, SSL, TLS
- 10 MB Default message Size (Expandable to 2 GB)
- Standard web browsers supported
- SOAP/XML, SMTP/S, POP3/S, HTTPS Standards supported
- 250MB Default mailbox size (Expandable to 10 GB)
- 30 Day Default Message Expiration (Upgradable)
- SAS70 Level 2 DataCenter Certified

## How It Works

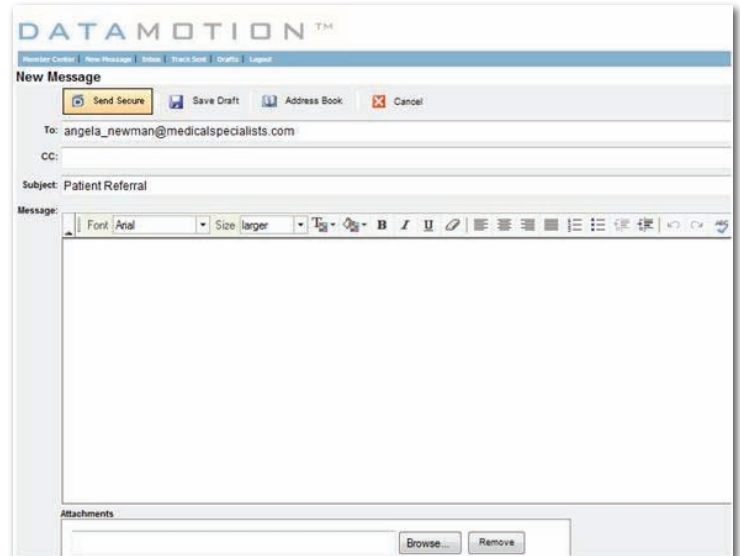

## Send Secure Button

Send mail securely simply clicking the "Send Certified" button in your supported email clients!

## Send via Portal

Travelling and still need to send/receive a secure email? Don't worry, you can send and receive your secure mails from any web browser.

*"SecureMail's licensing is flexible and straight-forward. The support team is friendly and responds quickly. The integration with Outlook is nearly seamless. SecureMail makes it a breeze for anyone to send data securely."*
