

## Easy-to-Implement, Email-based Global-Class File Transfer for Compliance, Visibility and Business Process Efficiency

When organizations need to exchange large files with their partners and customers, they have historically used File Transfer Protocol (FTP). However, FTP is inherently insecure and difficult to administrate, especially for one-off ad hoc file transfer requests. These FTP management headaches result in delayed business processes, and create bottlenecks for critical data flow. Your knowledge workers need tools to exchange large files easily and securely. IT departments need tight security to ensure regulatory compliance, and need visibility to enforce policies and monitor service level agreements.

DataMotion FileTransfer solution gives your organization the tools they need to easily and securely exchange large files with coworkers, customers, and partners. It accomplishes this while providing the visibility and governance to track and monitor all file exchange activity.

## Track, Filter, Control and Report on your business information exchanges

DataMotion FileTransfer, our carrier-grade hosted file transfer solution, leverages your existing IT investment for quick-to-deploy solutions that are easy to administrate and require almost no training. Senders and recipients use common tools like their email client and web browser to send and receive files. Built atop DataMotion's Intelligent Information Transport (IIT) platform, FileTransfer offers enterprise-class security, scalability and flexibility. Now, businesses of all sizes can benefit from the same high-end encryption used by government agencies and large financial, healthcare, and government enterprises.

Files often considered too large for standard email, or containing PII include:

- Graphics Images
- CAD/CAM Drawings
- Media Files
- Legal Documents
- Payroll Information
- Human Resource Files
- Financial Statements
- Healthcare or Insurance Claims

- Recognize immediate cost reduction, improve your bottom line, and increase your business's competitive advantage.
- Reduce your exposure to compliance policy violation, litigation and penalties.
- Make intelligent business decisions with the visibility gained from management, control, security and reporting of data exchanges.
- Extend trust by developing more secure communication between you and your customers.
- Quickly and cost-effectively reduce human error so you can focus on your business priorities.
- Meet SLA requirements

## BENEFITS

**Increased Customer Satisfaction** - Meet your service level requirements, and increase customer satisfaction and retention.

**Trustworthy communication with your customers and partners** - With robust encryption and easily-tracked delivery paths, you can send sensitive information with confidence.

**Increased Productivity** - Knowledge workers are empowered to send and receive large files without delays imposed by manual FTP uploads and password coordination.

**Immediate cost containment** - Cut costs associated with IT resources for ftp servers, installation, training and support.

**Fast deployment** – FileTransfer leverages existing IT infrastructure by integrating seamlessly with existing messaging or disparate systems.

**Reduced Risk** - Minimizes exposure to policy violation, litigation and penalties.

**Compliance** - Exchange information with full confidence that files remain secure and compliant during transit and in storage.

**Better Control** - Messages are monitored, tracked and reported on every step of the way. This enhanced visibility helps you improve business processes and make better business decisions.

**Simplicity** - Have all your users securely exchanging information within hours.

## FEATURES

Send and large files up to 2GB

Drag and Drop Interface

Automatic file download

File Directory Monitoring

Checkpoint Restart capability

Cobranded portal

Automatic Account Provisioning

HTML and CSV Reporting

Built-in tracking and auditing for sent and received files and messages

Simple to use Encryption - No PKI necessary

Offered on premise or SaaS

Up and Running within a Day

24 x 7 x 365 Monitoring

Fully compatible with on-premise or cloud based archiving systems

Works with Exchange, Lotus Notes and Groupwise

APIs for integration with legacy systems or business productivity systems

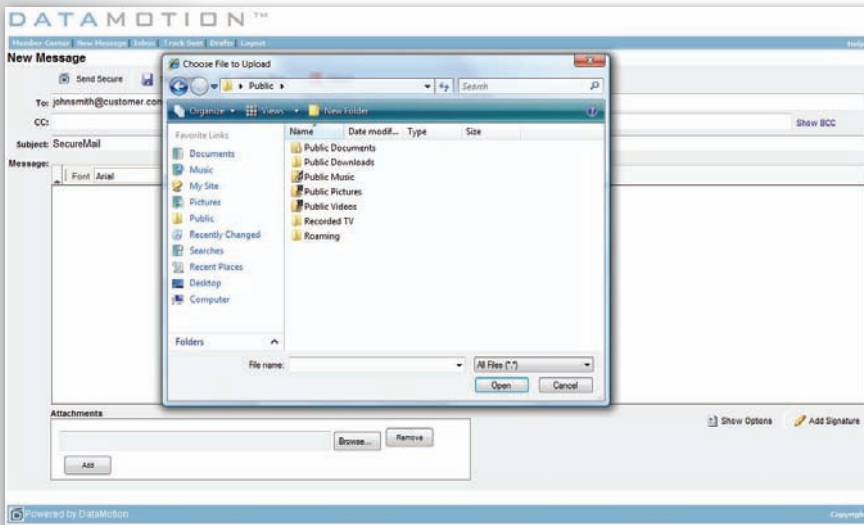

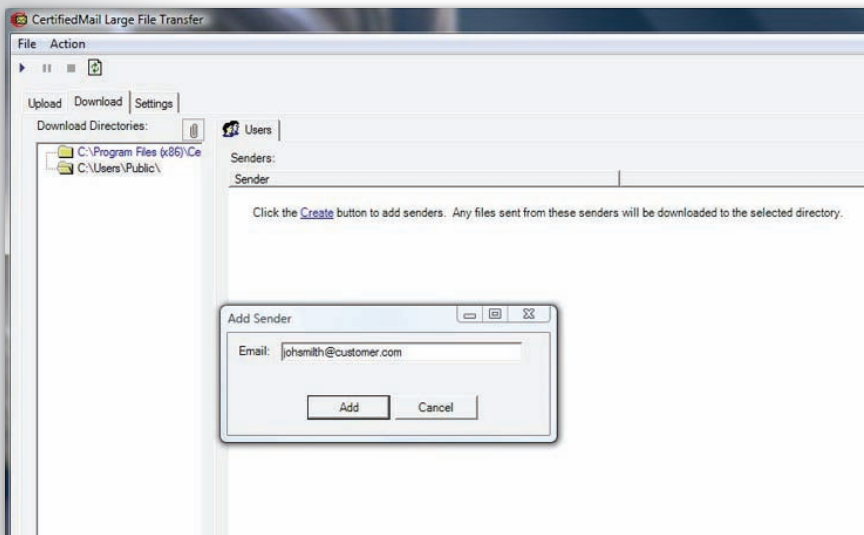

### ADDITIONAL TECHNICAL SPECIFICATIONS:

- Industry Standard encryption: 3DES, SSL, TLS
- Standard web browsers supported
- SOAP/XML, HTTPS Standards supported
- Windows, Mac, Linux, and Unix support
- 7 Day Default Message Expiration (Upgradeable)
- SAS70 Level 2 DataCenter Certified

### How It Works Option 1 - File Attached to SecureMail

### How It Works Option 2 - FileTransfer Client

*“With the volatility of the economy, companies are looking to efficiently share, secure, audit and manage the movement of information from point to point. Having a platform that automates some of these governance processes without the expense of additional hardware or expensive integration middleware -- means companies can be more transparent and confident that they are compliant with industry, regional and legal regulations and mandates.”*

**Frank Kenney, research director,  
Gartner**
